

Tim Jordan
December 1, 2023

Exeter R6 School District has created a plan to ensure drinking water is safe for students and adults in the school district. It is our goal to comply with RSMO160.077 “Get The Lead Out of School Drinking Water”(2022)

Exeter School is utilizing the Missouri Department of Health and Senior Services as the guide to test the water and communicate results to the community. The state has determined that lead remediation levels of drinking water to be 5 ppb. When a lead sample is detected at or above this level, Exeter Schools will take immediate action to address the source of the lead. It is our goal and responsibility to protect children and staff with safe drinking water.

The plan

- We have created an inventory of all drinking and cooking water outlets in the district.
- Test water outlets that are used for drinking and cooking before August 1,2024.
- This [link](#) will explain the health effects of lead to the public
- Communicate all test results to the community within two weeks of getting results
- Communicate remediation plans if necessary after getting the results.

The safety of students and staff is of utmost importance to Exeter Schools. We will continue to communicate, retest, and remediate based on the results of the water testing results. All testing will be sent to approved testing labs by the state agencies.

Sincerely,

Mr. Tim Jordan
Superintendent of Schools
